Red (high risk: take immediate action)

Many (but not all) children with these features are seriously unwell and need to be assessed straight away in hospital. Dial '999' for an ambulance if necessary.

Notes

SAM

Sepsis Assessment & Management

What to look for if your child has a temperature and you are concerned

Look out for the signs of sepsis

A raised temperature (fever) in children is common, but can be worrying. Almost all children will recover quickly and without problems. However, a very small proportion may have a serious infection with sepsis (bloodstream infection) that requires urgent treatment in hospital.

This information is designed to help you monitor your child's condition if they have a raised temperature, so you know when to ask for help and can describe the symptoms.

Just tick off any of those symptoms that you observe with a note of the date and time, and follow the advice at the top of the page.

For ease of use, the symptoms are split into:

- Amber, where medical advice should be asked for
- Red, which means you should get the child to hospital quickly – dial '999' if necessary and ask for an ambulance.

Again, we must stress that the great majority of children do not have sepsis. But if you do have concerns and your child seems to be getting worse, even if their temperature falls, act swiftly just in case.

Amber (intermediate risk: ask for advice)

Some (but not all) children with these symptoms are seriously unwell. If you have any concerns, a trained health professional needs to assess them promptly. Contact your GP, NHS 111 or minor injuries unit.

Skin, lips and tongue	time/date	time/date	time/date	Notes
Unusually pale				
Rash that fades when pressed firmly (use a clear glass)				
Activity				
Not responding normally to family or carers				
Not responding normally to family or carers Not smiling
